

PERSONAL MELTING POT

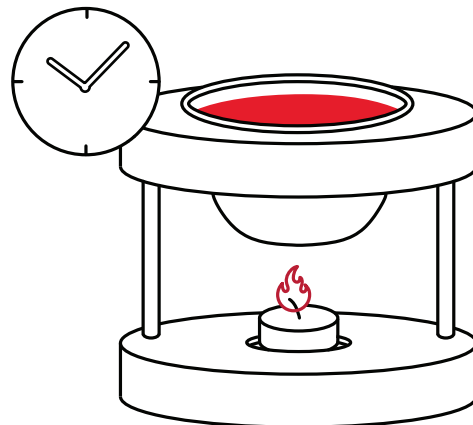

1.- Insert the cup in the base of your personal melting pot.

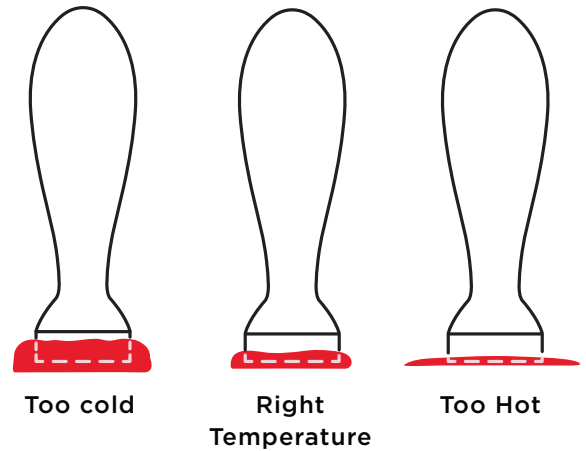

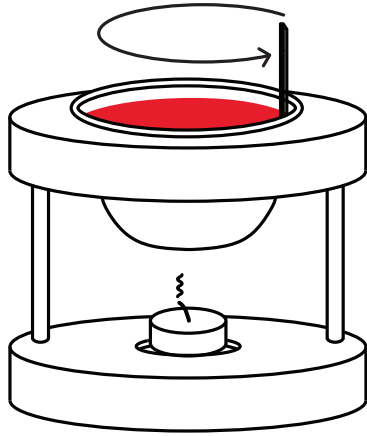

2.- Break the sealing stick into small pieces and place them inside the cup.

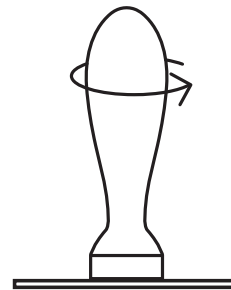

3.- Place the tea light under the cup and turn it on. Wait between 15 to 30 minutes while the sealing wax melt completely. The waiting time depends on how many sealing wax bars you are going to melt at the same time.

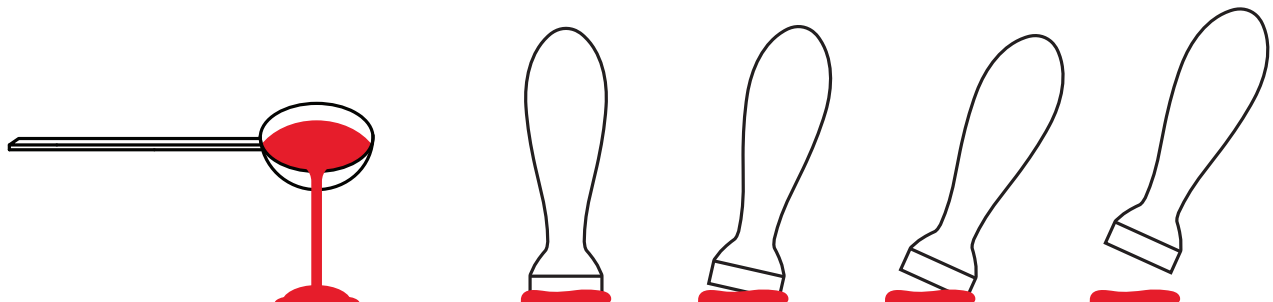

4.- Turn the tealight off. Mix the sealing wax with the spoon and wait until it has the right consistency for sealing, it must be viscous but not too solid or too liquid. With the right temperature you will achieve a good high relieve and the sealing wax will not stick to your plate.

5.- Lubricate your stamp on the pre-lubricated fabric

6.- Apply right amount of seal wax depending on the size of your seal, stamp the seal and gently remove it. If it sticks or you have trouble removing it, leave it for a few minutes until the sealing wax cools down and try again. enfíe e intenta despegarlo nuevamente.

7.- If the sealing wax gets stuck on your stamp plate, cool the plate with ice and remove the wax with a wooden toothpick.
